RJK / GLR TO DRILL TEST ALDINA TOWNSHIP BASE METAL PROPERTY

November 25, 2005.

TSXV: RJX.SV.A

Kirkland Lake, Ontario. RJK Explorations Ltd. “RJK” and GLR Resources Inc. “GLR” are to drill test their 100% owned 13,000 acre base metal property located in Aldina, Marks, Sackville and Adrian Townships 65 kilometres west of Thunder Bay, Ontario.

RJK / GLR over the past year, have continued to evaluate the property for its base metal potential. Work has included additional line cutting, ground geophysics, soil geochemistry and interpretation of the companies VTEM airborne geophysical survey.

Three areas will be tested by diamond drilling including an untested 700 metre long area considered to be of high prospectivity located on the main felsic (rhyolite) horizon on which the companies had previous success in the discovery of in situ high-grade base metal mineralization (zinc, lead, silver, gold)

“The Aldina property has been worked regularly over the past several years by the companies and we are in pursuit of as yet, an undisclosed source of large very high-grade glacial boulder debris which we continue to believe originated from our property” said Glenn Kasner, president of RJK. It’s a property one cannot give up easily on considering the size and grades of the debris. We were successful in the past in tracking down another suite of high-grade glacial boulders which led us to an in situ base metal discovery and hope to be able to do the same with these.
