RJK Completes Airborne Survey of Blackwater Claim Groups and Prepares for Drilling Program at Dempster Lake, Ontario

Kirkland lake, Ontario, January 18, 2011: **RJK Explorations Ltd., (RJX.A: TSXV)** ("RJK") wishes to announce that it has completed the heli-borne magnetic and electromagnetic survey of both the East and West Blackwater Gold claim groups, which are contiguous to the Richfield Ventures Blackwater Gold claim group in the Blackwater Gold District of B.C. Final preparation and interperation of the airborne data is expected soon to aid in follow-up work programs this spring to define drill targets. This data will be posted to the Company's website when it becomes available.

It was fortunate that with the recent addition of the Dave2 claim to the eastern boundary of RJK's West Blackwater Gold claims, the Company was able to obtain ground that covers a number of anomalies that were previously identified as drill targets through airborne surveys and ground work done by a junior exploration company last year. RJK also notes that Troymet Exploration (TYE) has just announced the signing of a drilling contract for their Key Project, which is contiguous on the west to RJK's West Blackwater Gold claim group and on the north to the Richfield Blackwater Gold deposit. It should be noted that numerous maps on Troymet's web site indicate a VTEM anomaly with an interpreted buried intrusive and coincident gold-silver-zinc mineralization from prospecting located just to the east of RJK's property boundary.

Additionally, RJK is preparing to drill it's Dempster Lake Claims in the Meen-Dempster Greenstone Belt located approximately 20 kilometers south-east of the past producing Golden Patricia Mine, Pickle Lake Area, Ontario. Crews are readying the Cat Lake winter road out of Pickle Lake from which RJK will access the property. At least three drill ready targets have been identified from historical work conducted by Cochenour Willans and by Noranda which consisted of line cutting, magnetometer and VLF-EM surveying, limited mapping and humus and till geochemical sampling during the 1970s and 1980s respectively. Although drilling was recommended in both cases, these areas were not drill tested. It is anticipated that the drill could be on site within the next two weeks.

Forward Looking Statements: This news release contains or refers to forward-looking information. All statements, other than statements of historical fact, that address activities, events or developments that RJK believes, expects or anticipates will or may occur in the future are forward-looking information. Such forward-looking information includes statements contained in this news release regarding discussions in respect of a potential acquisition and funding arrangement and RJK's expectations regarding same and the trading of its shares on the TSX Venture Exchange. This forward-looking information reflects the current expectations or beliefs of RJK based on information currently available to it. Forward-looking information is subject to a number of risks and uncertainties that may cause the actual results of RJK to differ materially from those discussed in the forward-looking information, and even if such actual results are realized or substantially realized, there can be no assurance that they will have the expected consequences to, or effects on, RJK. Factors that could cause actual results or events to differ materially from current expectations include, but are not limited to: the failure of RJK to enter into an agreement in respect of such arrangement; delays in obtaining or failure to obtain any required regulatory and/or shareholder approval; and other factors. Any forward-looking information speaks only as of the date on which it is made. Although RJK believes that the assumptions inherent in the forward-looking information are reasonable, forward-looking information is not a guarantee of future performance and accordingly undue reliance should not be put on such statements due to the inherent uncertainty therein.
